RE: Varsity Soccer Field

Thank you for letting Front & Center Turf present this proposal for field maintenance on the above field. The following is a description of each practice and the price:

- An initial **double**, deep coring of the playing surface with a piston-driven golf greens aerator using 7/8" tines at a spacing of 2.4" by 3". This coring process is far superior to using a drum style aerator because of deeper soil plugs being removed and far more soil disruption occurring. **\$850.00**
- Seed entire field area with 100% Perennial Ryegrass athletic seed mix using a slit-seeder. After it has been seeded, a high Phosphorous and a high Potassium fertilizer will be applied to enhance germination. **\$1300.00**
- **Three** applications of a complete fertilizer will be applied to the field throughout the growing season. All areas will be sprayed for broadleaf herbicide as needed. A complete fertilizer (N-P-K) is essential based on the results of the soil test that was conducted! **\$230.00 per occurrence--\$690.00**
- A subsurface insecticide that will suppress insects, like grubs, will be applied in the summer to give control through the fall. **\$230.00**

After the athletic playing seasons are over in the fall, we will perform the following maintenance practices to prepare the playing field for the following season:

- Deep Core the playing surface with a piston-driven golf greens aerator using 7/8" tines at a spacing of 2.4" by 3". This coring process is far superior to using a drum style aerator because of deeper soil plugs being removed and far more soil disruption occurring. **\$850.00**

Total cost for this program for the year for the Soccer Field is \$3920.00.

Front & Center Turf, LLC is a proud member of The Ohio Turfgrass Foundation, The Sports Turf Managers Association of America, and The Ohio Lawn Care Association.

Front & Center Turf, LLC is a fully licensed and insured company.

Respectfully submitted,

Michael R. Dover, Sr.
